

1 Apache::Table - Perl interface to the Apache table structure

1.1 Synopsis

```
use Apache::Table ();

my $headers_out = $r->headers_out;
while(my ($key,$val) = each %$headers_out) {
    ...
}

my $table = $r->headers_out;
$table->set(From => 'dougm@perl.apache.org');
```

mod_perl needs to be compiled with at least one of the following options:

```
DYNAMIC=1
PERL_TABLE_API=1
EVERYTHING=1
```

1.2 Description

This module provides tied interfaces to Apache data structures.

1.2.1 Classes

- **Apache::Table**

The `Apache::Table` class provides methods for interfacing with the Apache `table` structure. The following Apache class methods, when called in a scalar context with no "key" argument, will return a `HASH` reference blessed into the `Apache::Table` class and where `HASH` is tied to `Apache::Table`:

```
headers_in
headers_out
err_headers_out
notes
dir_config
subprocess_env
```

1.2.2 Methods

- **get**

Corresponds to the `ap_table_get` function.

```
my $value = $table->get($key);
my $value = $headers_out->{$key};
```

- **set**

Corresponds to the ap_table_set function.

```
$table->set($key, $value);  
  
$headers_out->{$key} = $value;
```

- **unset**

Corresponds to the ap_table_unset function.

```
$table->unset($key);  
  
delete $headers_out->{$key};
```

- **clear**

Corresponds to the ap_table_clear function.

```
$table->clear;  
  
%$headers_out = ();
```

- **add**

Corresponds to the ap_table_add function.

```
$table->add($key, $value);
```

- **merge**

Corresponds to the ap_table_merge function.

```
$table->merge($key, $value);
```

1.3 Maintainers

Maintainer is the person(s) you should contact with updates, corrections and patches.
